

Greater Wenatchee Regional Landfill

Greater Wenatchee Regional Landfill provides area communities and businesses with professional disposal services that are safe and convenient. The landfill is engineered with overlapping environmental protection systems that meet or exceed rigorous government regulations and are subject to highly regulated monitoring and reporting requirements. Systems include engineered liners and covers, leachate collection and removal, and landfill gas collection and control. This site accepts primarily municipal solid waste (household waste), construction and demolition debris, industrial waste, and special waste. This facility does not accept hazardous waste.

Containment Design

The Greater Wenatchee Regional Landfill uses a geo-synthetic clay liner plus a high-density polyethylene liner, built to strict engineering standards. Our double-liner system protects the environment by ensuring waste is contained and isolated from soil and groundwater. All construction is monitored and documented by independent third-party engineering firms and subject to review and approval by the Chelan-Douglas Health District and the Washington State Department of Ecology.

Groundwater Monitoring

Groundwater is monitored at eight monitoring wells – one upgradient and seven downgradient. Monitoring results are submitted to the Chelan-Douglas Health District and the Washington State Department of Ecology.

Landfill Gas Management

This site has an active gas extraction system, which is managed by flare. Collected landfill gas is routed to a single enclosed flare with a capacity of 2,000 standard cubic feet per minute.

Leachate Collection and Treatment

All waste cells have an automated leachate collection and removal system, which maintains sump levels in accordance with regulatory standards. Leachate is then managed in a double-lined evaporation pond.

GREATER WENATCHEE REGIONAL LANDFILL

191 Webb Road
East Wenatchee, WA 98802
509-884-2802

HOURS OF OPERATION

Monday – Friday, 6 am – 4 pm
(This facility is not open to the public.)

YEAR OPENED

1960

PROJECTED LIFE REMAINING

91 years

FACILITY ACREAGE

257 acres

PERMITTED FOOTPRINT

135 acres

REMAINING PERMITTED CAPACITY

32,187,933 tons

TONS PROCESSED ANNUALLY

350,000 tons

OWNERSHIP

Waste Management of Washington, Inc.

PERMIT TYPE AND PERMIT

Subtitle D MSW

REGULATORY AGENCIES

Chelan-Douglas Health District and Washington State Department of Ecology

NUMBER OF EMPLOYEES

Nine

Acceptable Material

Asbestos – friable/non-friable
Auto shredder residue
Construction and demolition (C&D) debris
Industrial and special waste

Medical waste (treated)
Municipal solid waste (MSW)
Tires
Yard waste

Unacceptable Material

Batteries
Biosolids
E&P wastes
Explosives

Hazardous waste
Medical waste (untreated)
NORM
Waste containing free liquids

Waste Approval Process

WM has a defined waste screening protocol for each of its Subtitle D non-hazardous waste facilities to protect both our employees and the environment. For all industrial and special waste streams, the generator or agent must complete a Generator's Non-Hazardous Waste Profile (available online at wmsolutions.com) for review by our technical staff.

Community Partnerships and Involvement

The Greater Wenatchee Regional Landfill is proud to be an active supporter of local school groups and community programs.

Our most significant contribution to the community is our work to improve biodiversity and share 80 acres of endangered "shrub-steppe" habitat as an outdoor learning lab for local high school students.

As a result of our hands-on environmental education and biodiversity work, this site has earned prestigious certification from the Wildlife Habitat Council. Biodiversity projects currently underway include:

- » Water for mule deer and native birds: Water is an especially important resource here because of our location in the "rain shadow" of the Cascade Mountains. By installing wildlife water guzzlers to provide a constant water supply, we are supporting native wildlife and bird populations.
- » Natural controls for invasive species: We use natural methods to manage unwelcome plants and wildlife. We use the lesser knapweed flower weevil to discourage knapweed. To control starling populations, we have installed nest boxes for American kestrel falcons.

The Greater Wenatchee Regional Landfill hosts tours for local students, businesses and organizations. To schedule a tour, please call 509-884-2802.
